US-US-SECTED-4

Sequence 4, Application US/0929225

Patent No. 645566

GENERAL INFORMATION:
APPLICANT: McCall, Catherine A.
APPLICANT: Macall, Catherine A.
APPLICANT: Maber, Exic R.
TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: AL-2-C3
CURRENT PAPLICATION NUMBER: 60/098,909
EARLIER APPLICATION NUMBER: 60/098,295
EARLIER APPLICATION NUMBER: 60/098,295
EARLIER APPLICATION NUMBER: 60/098,565
EARLIER APPLICATION NUMBER: 60/098,565
EARLIER APPLICATION NUMBER: 60/098,565
EARLIER APPLICATION NUMBER: 60/098,295
EARLIER APPLICATION NUMBER: 60/098,295
EARLIER APPLICATION NUMBER: 60/098,295
EARLIER APPLICATION NUMBER: 60/098,295
EARLIER APPLICATION NUMBER: 09/662,013
EARLIER PILING DATE: 1998-04-17
NUMBER OF SEQ ID NOS: 49

SOFTWARE: PatentIn Ver. 2.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 13, Application US/0929225
Patent No. 6455686
GENERAL INFORMATION:
APPLICANT: McCall, Catherine A.
APPLICANT: Muter, Shirley Wu
APPLICANT: Weber, Eric R.
TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS
TITLE OF INVENTION: AND USES THEREOF
FILE REPERENCE: AL.2-C3
CURRENT APPLICATION NUMBER: US/09/292,225
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 6, Application US/09134618
Sequence 6, Application US/09134618
Patent No. 6417328
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NOVEL TRAIL RECEPTORS, NUCLEIC ACIDS ENCODING SAME, AND TITLE OF INVENTION: METHODS OF USE THEREOF FILE REPRENCE: 480140.432
CURRENT APPLICATION NUMBER: US/09/134,618
CURRENT PILING DATE: 1998-08-14
NUMBER OF SEQ ID NOS: 6
SOFTWARR: PATENTIN Ver. 2.0
SEQ ID NO 6:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           APPLICANT: Ashkenazi, Avi J.
APPLICANT: Chuntharapai, Anan
APPLICANT: Kim, K. Jim
TITLE OF INVENTION: METHOD FOR MAKING MONOCLONAL ANTIBODIES AND
TITLE OF INVENTION: CROSS-REACTIVE ANTIBODIES OF THE METHOD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 48; DB 4; Length 350;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        US-09-29-225-15

US-09-29-225-15

Sequence 15, Application US/0929225

Patent No. 6455686

GENERAL INFORMATION:

APPLICANT: Macall, Catherine A.

APPLICANT: Macall, Catherine A.

APPLICANT: Macall, Catherine A.

APPLICANT: Maber, Exic R.

TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHAGOIDES NUCLEIC ACID MOLECULES, PROTEINS

TATLIER APPLICATION NUMBER: 06/098,909

EARLIER FILING DATE: 1998-09-13

EARLIER FILING DATE: 1998-04-17

EARLIER FILING DATE: 1998-04-17

EARLIER FILING DATE: 1998-04-17

EARLIER FILING DATE: 1998-04-17

SEQ ID NO 15

LENGTH: 555

TAYDE: DATE

Note-Duplication of 24 bp in exon 10 leads to the use of a cryptic splice site. The normal splice site is still present but
                                                                                                                                                                                                                                                                                                                                                                                                                                                   macrophages.

DOLYMORPHISM: A 24 bp duplication in exon 10 leads to the activation of an alternative splice site and the production of an alternative splice site and the production of an inactive protein. About 6% of the population are deficient for CHIII activity, while 35% are carriers and show reduced enzyme levels. People with CHIII deficiency appear perfectly healthy. MISCELLANGOUS: Patients with type 1 Gaucher disease (GD I) [MIN:230800] have very high plasma levels of CHIII, and this can be used as diagnostic aid and to evaluate the success of treatment. Successful therapy brings the CHIII activity levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                             TISSUE SPECIFICITY: Detected in spleen. Secreted by cultured

Isoid=09BZP6-1; Sequence=VSP_008635;
Isoid=09BZP6-2; Sequence=VSP_008635;
Name=3; Synonyme=TSA1902-S;
Isoid=09BZP6-3; Sequence=VSP_008634;
-:-TISSUE SPECIFICITY: Highly expressed in stomach. Detected at lower levels in lung.
-:-SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
Soot R.G., Blommaart E.F.C., Swart E., Ghauharali-van der Vlugt K., Sijl N., Moe C., Place A., Aerts J.M.F.G.;
Identification of a novel acidic mammalian chitinase distinct from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -!- ALTERNATIVE PRODUCTS:

"Chitinases are a multi-gene family in Aedes, Anopheles and
Drosophila...
Insect Mol. Biol. 7:233-239(1998).
-!- CATALYTIC ACTIVITY: Hydrolyais of the 1,4-beta-linkages of N-
acetyl-D-glucosamine polymers of chitin.
-!- SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Reprod. 50:927-934 (1994).
-!- FUNCTION: Binds to oocyte zona pellucida in vivo. May play a rol in the fertilization process and/or early embryonic development.
-!- SUBCELDUAR LOCATION: Secretory granules.
-!- TISSUB SPECIFICITY: Oviduct.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                         Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

Reprod. 53:285-294(1995).

-!- FUNCTION: Binds to oocyte zona pellucida in vivo. May play a role
in the fertilization process and/or early embryonic development.
-!- SUBCELLULAR LOCATION: Secretory granules.
-!- TISSUE SPECIFICITY: Epithelial cells of the oviduct.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
